Summary

Software and platform engineer with 15+ years of passion for Ruby, high performance/high availability systems, web applications, performance tuning, and tricky problems. I've enjoyed working on diverse problems, from high volume email to performance profiling and tuning apps for Superbowl commercial driven traffic to large scale Rails apps on AWS to designing and developing a high availability hosting platform to meet FINRA regulations for web sites for Electronically Traded Funds. Former Ruby 1.8.6 maintainer; contributor on a wide variety of other open source projects in the Ruby ecosystem.

Experience

Sr. Software Engineer, Engine Yard, 2009 – 2016

Wide variety of platform/devops roles, including Rails

development, OS/Distribution work, scaleable architecture for free tier product Prototype, EY Local to wrap our entire platform in a locally deployable VM, low level systems and application performance tuning, extensive Chef recipe work, fault tolerant logging bastion server for system audit trails & SOCII compliance.

Sr. Engineer & Architect, Enigo, 2002 – 2009, 2016

Sites and applications for commerce. Mostly Ruby

with some Perl and PHP (and Wordpress) on Linux. Highly available, customized Redmine based application for FINRA regulatory compliance tracking for a large US bank. High Availability stack for mutual fund and electronically traded fund sites and applications.

Sr. Software Engineer, Quris, Inc. - 2000 – 2002

Customized email generation and delivery systems

for customers like Charles Schwab and Discover Card, largely using Perl and Java; email build engines, email send and bounce handling architecture. Managed a small team to develop an ETL tool to deal with the large volumes of logs and bounce handling tasks we generated daily.

Sr. Software Engineer, Mobile Engines, 1998 – 2000

Employee #3; integral to interview and hiring

decisions for most of the engineering team. Tooling around CVS to enforce git-style branch based development paradigm; Perl extensions to C libraries for speech recognition. MySQL and Oracle DBA role.
